(54) Title: DEVICE AND METHOD FOR CONTROLLING INFUSION OF A LIQUID IN AN EXTRACORPOREAL BLOOD CIRCUIT

(57) Abstract: A Dialysis machine comprises: an extracorporeal blood circuit having an arterial pipe (12) and a venous pipe (15) respectively connected to an inlet and an outlet of a blood compartment (5) of a filter (4) having a blood compartment (5) and a dialysis liquid compartment (6) separated by a semi-permeable membrane (7); means (31) for determining a sequence of infusion of a liquid in the extracorporeal blood circuit, from at least one characteristic value (FF , TMP_{re} , K_{uf}) correlated with the concentration of the blood (C_E and/or a filtration efficiency of the filter (4); and means for infusing the infusion solution in the arterial pipe (12) and in the venous pipe (15) in accordance with the determined infusion sequence.
